Coir for Berry Crops

THE FUTURE IS BLUE

Blueberry production and consumption has been increasing rapidly in recent years. Greenhouses and mainly tunnels are being used to extend the growing season and harvesting period.

Blueberry

Blueberries are traditionally grown in the ground. The soil should be well-drained, yet with sufficient moisture holding capacity.

Optimizing blueberry production requires a high level of control, a balanced air-to-water ratio in the ground of growing media, proper micro-irrigation and fertilization.

All these can be achieved when using soilless technology in general and coco-coir in particular.

The Blue Berry Blend

Pelemix's Multi-Drain OpenTop System blueberry production

Pelemix's ideal solution for blueberry production was developed by our R&D team in close cooperation with our crop specialists and key blueberry growers.

Our 3B Multi-Drain OpenTop System for blueberries has been created by combining the ideal volume of a specially formulated coco-coir blend and an innovatively designed Pelemix OpenTop bag.

In addition to the wide range of compressed products coming from our production sites, we also provide Coir & Peat blended substrates coming from our plant in Spain, Pelemix Espana SL.

Pelemix's 3B OpeTop system for higher yield, excellent fruit quality and earlier harvesting.

3B OpenTop Benefits

- Higher yield compared to growing in the ground.
- Earlier harvest possible due to quicker growth and fruit development.
- Premium fruit quality.
- More plants per hectare (or acre).
- Labor saving and labor friendly solution – easy installation.

3B OpenTop Benefits

- High drainage capacity.
- Special polyethylene bag UV protected.
- The 3B OpenTop replaces more expensive pots and containers.
- Faster return on investment.
- 3B is also available for various pot and container size.
